***Guaranteed.***

## MC05V "Green" Printing Blanket

The MC05V is a blanket designed for use in **Conventional Ink, Sheet Fed applications.**

The MC05V uses a unique ecological manufacturing process that utilizes a "solvent free" rubber laminating process. The MC05V incorporates new closed cell, **ThermaSphere®** compressible layer and state of the art carcass technologies that give the blanket longer life by improved shock absorption and faster recovery. The new **ground and polished printing surface** insures exact gauge control and provides **excellent ink transfer and sheet release.**

This provides the printer with exceptional print quality and dot gain control that will insure smooth and even ink lay down resulting in **fuller solids and cleaner halftones** in any prepress format.

As with all DYC/Kinyo blankets, the thickness is guaranteed to be within  $\pm .0008$ " from roll to roll.

## Features & Benefits

- Ecological manufacturing process
- ThermaSphere® compressible layer
- Specially designed new Type 34 carcass
- Ground, polished surface

## Specifications

Type:	Sheet Fed, Conventional ink
Thickness:	.077"
Overall Hardness:	83°
Color:	Blue

## blanket guarantee:

The DYC/Kinyo manufacturing process guarantees no pinholes, no porosity and uniformity of thickness from blanket to blanket.

The blankets are guaranteed to be talc free, in perfect condition and ready to mount on your press when you receive them. If our blankets do not perform, it will cost you nothing.
